## **INTRODUCTION**

This report contains selected 2009 year-end statistics from the Massachusetts Road Inventory file and supersedes the 2008 report issued last year. The Road Inventory file, maintained by the Office of Transportation Planning, contains information on mileage, identification, characteristics, and condition for all roadways in the state. It is a widely used transportation planning resource within the Massachusetts Department of Transportation (MassDOT) and is the foundation of several important programs. Among its more important uses include:

- Identifying functional classification, jurisdiction, and National Highway System status of all roadways in the state.
- Fulfilling Highway Performance Monitoring System (HPMS) reporting requirements to the Federal Highway Administration.
- Determining centerline miles of city/town accepted roads used for allocating State Aid to communities.

The Road Inventory file also serves as the foundation of Massachusetts Geographic Information System (GIS) capabilities. It is linked to 1:5,000 Centerlines using ArcGIS and contains approximately 470,000 road inventory records representing over 36,000 centerline miles of roadway. This GIS system allows for easy mapping of any of the 77 attributes in the Road Inventory file at any geographic level (i.e., State, MassDOT Highway District, Metropolitan Planning Organization (MPO), Town, etc.). Please refer to the Appendix for a list of the attributes.

This 2009 year-end report contains centerline and lane mileage data on jurisdiction, functional classification, and federal-aid status at the town, MPO, MassDOT Highway District, and state levels. Please note that not all mileage for ramps are included in any of these reports and that lane miles do not include any shoulders. An appendix containing documentation of the Road Inventory databases accompanies these reports.

We hope that you find this report useful. If you should require any additional information about the content of this document or want to learn more about the Road Inventory program, please contact Judy Lai at (617) 973-7336 or Kevin Lopes at (617) 973-7343.

## I. DEFINITION OF TERMS AND CATEGORIES

## DEFINITION OF TERMS AND CATEGORIES

1. **Centerline Miles** refer to the linear length of a road segment. For divided highways, only the length of one side of the roadway is counted.

2. **Lane Miles** refer to the linear length of lanes of a road segment. For divided highways, the number of lanes on both sides of the roadway are counted. Shoulders and auxiliary lanes are not included in the calculation of lane miles.

3. **Jurisdiction** refers to the agency or entity that owns and has administrative authority over the roadway. The Road Inventory file contains 18 different jurisdiction categories. For the purposes of this report, they have been consolidated into ten groups. Please note that unaccepted roads consist of roads open to public travel but not formally accepted by a city or town, as well as some private ways.

4. **Functional Classification** defines the character of services that a particular roadway is intended to provide. Roads serve to provide mobility for vehicle access to locations. The process of functional classification was mandated by the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) and implemented in 1993 by the Office of Transportation Planning in cooperation with the 13 regional planning agencies. Roadways are divided into the following three classification categories:

*Arterials:* These roadways provide the highest level of mobility at the greatest vehicular speeds for the longest uninterrupted distances. Generally, these roadways provide connections between Massachusetts cities, metropolitan regions, and bordering states and can be broken down into three sub categories:

Limited Access Principal Arterials: These arterials provide the greatest level of regional mobility with all connections between these roadways and other transportation facilities (other roadways or parking lots serving land use) provided by high-speed ramps. Interstates, freeways, and tollways would fall into this category. Vehicular speed limits generally fall between 45 M.P.H and 65 M.P.H. depending on the design of the roadway and density of development. According to the MassDOT Development & Design Guide, these roads must be designed to speeds between 50 and 75 M.P.H. To maintain these higher speeds, these roadways require grade separation with all crossing roadways or rails, and mostly carry two lanes of traffic in each direction, although there are exceptions in Massachusetts along a portion of State Route 2 and US 6, where the roadways have one lane in each direction. These roadways serve as the primary connectors between cities, regions, and bordering states.

Full Access Principal Arterials: These arterials provide a lower level of regional mobility than limited access principal arterials, but provide the highest level of mobility for roadways with driveway access, unsignalized intersections, and signalized intersections. Vehicular speed limits vary between 25 M.P.H. in urban areas to as high as 55 M.P.H. in rural areas. In the more rural areas of the state (Berkshire and Franklin Regions), these roadways serve as the primary connection between cities, regions, and bordering states. These roadways support major shopping areas, high density residential developments, regional hospitals, and other regional scale developments serving high volumes of traffic.

Full Access Minor Arterials: These arterials provide a lower level of regional mobility than principal arterials, by linking towns and cities together. These roadways can provide the highest level of mobility through rural areas without principal arterials, while providing important connections between the principle arterial and collector network in urban areas. Vehicular speeds vary between 25 M.P.H. in urban areas to as high as 55 M.P.H. in rural areas. These roadways support intra county level shopping centers, moderate residential development, and travel through many urban town centers.

*Collectors:* These roadways provide an intra regional level of mobility, connecting the arterial network with the local roadways. In rural municipalities with no arterial roadways, these roadways can provide the highest mobility. There are two subcategories for this type of roadway:

Major Collectors: These roadways provide service to any areas of the state not serviced by arterials and service land use of a regional importance such as schools, parks, and smaller scale retail use. Vehicular speeds vary between 25 M.P.H. in urban areas to as high as 55 M.P.H. in rural hinterlands. In many rural municipalities, these roadways travel through many town centers.

Minor Collectors: These roadways collect traffic from the local roadway network and distribute them to the major collector or arterial system. In addition, these roadways provide service to smaller municipalities and link to important small scale land use serving local communities. Vehicular speed limits range between 25 M.P.H. in the urban areas to as high as 50 M.P.H. in the rural hinterlands.

Local Roadways: These roadways provide the lowest level of mobility by accessing adjacent land use, serving local trip purposes, and connecting to higher order roadways. Vehicular speed limits range between 15 M.P.H. in urban centers to 40 M.P.H. in the rural hinterlands.

5. **Aid Category** refers to funding categories that have been established by ISTEA and continued in the Transportation Equity Act -21 (TEA-21), and Safe, Accountable, Flexible, Efficiency, Transportation Equity Act: A Legacy for Users (SAFETEA-LU). The Road Inventory directly identifies which roadways fall under the National Highway System Federal Funding category and indirectly identifies which roadways fall under the Surface Transportation Program Federal category and Non-Federal Aid category. These three funding categories are described below:

National Highway System (NHS) funded roadway network represents all Interstates, most of the principal arterial system, and a small portion of the urban collectors. The rural minor collectors or local roadways are not eligible for NHS funding. In addition, roadways connecting the NHS roadways with military bases (known as the Strategic Highway Network) are also considered part of the NHS network. NHS passenger and freight terminals are connected by roadways called NHS connectors, but are not eligible for NHS funds if these roadways consist of rural minor collectors or local roadways. The NHS represents the main arteries of commerce and the critical roadways for defense, connecting from state border to border and all designated NHS designated terminals.

Surface Transportation Program (STP) funded roadway network covers all Interstates, principal and minor arterials, and major collectors. Every ten years, the US Census Bureau updates the urbanized area zones for the entire country. The roadways that travel through these zones are considered urban, while the other roadways traveling outside of the zone are considered rural. Within the functional classification system, roadways can change between arterials and collectors when crossing between an urbanized area and a rural area and visa versa. In terms of the STP funding category, all arterials and collectors within the urban zone are Federal-aid eligible. For rural areas, all arterials are eligible, but only major collectors are Federal-aid eligible. The roadways designated as rural minor collectors are not eligible under the current transportation act - Safe, Accountable, Flexible, Efficiency, Transportation Equity Act: A Legacy for Users (SAFETEA-LU) legislation. The previous transportation act -Transportation Equity Act -21 (TEA-21) provision 1108(f) permitted up to 15% of STP funds for use on rural minor collectors.

State and Local Aid includes chapter 90 and other non-Federal Aid categories comprised of roads functionally classified as rural minor collectors and local roads. This funding category can finance roadway projects along any Federal Aid eligible roadway; however, this rarely occurs.
