

HOUSE No. 1011

By Mrs. Gray of Framingham, petition of Barbara E. Gray and others that the Department of Correction be directed to provide support services for new mothers and their newborn children at the Massachusetts Correctional Institution at Framingham. Housing and Urban Development.

The Commonwealth of Massachusetts

In the Year One Thousand Nine Hundred and Eighty-Two.

AN ACT TO FOSTER THE INTEGRITY OF FAMILY TIES BY PROVIDING SUPPORT SERVICES FOR NEW MOTHERS AND THEIR BABIES AT MCI FRAMINGHAM.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

1 Section 118 of Chapter 127 of the General laws is hereby amend-
2 ed by inserting after the last paragraph the following new para-
3 graph: —

4 The Department of Corrections shall contract on or off site for
5 the provision of space for a residential program for women incar-
6 cerated at MCI Framingham and babies born to said women
7 during their present incarceration providing that said babies are
8 conceived prior to sentencing. The program shall be made avail-
9 able to all mothers presently incarcerated and mothers in pre-
10 release status. The program shall provide services to mothers and
11 infants from the time they leave the hospital to the time the mother
12 is released. The residential aspect of this program shall continue
13 until the child is eighteen months of age.

The first part of the report is devoted to a general description of the project and the methods used. It is followed by a detailed account of the results obtained in the various experiments. The final part of the report is a summary of the conclusions reached and a discussion of the implications of the work.

The Experimental Results

The results of the experiments are presented in this section. They are arranged in order of increasing complexity. The first part of the section deals with the results of the simple experiments, while the second part deals with the results of the more complex experiments. The results are presented in the form of tables and graphs, and are accompanied by a detailed discussion of their significance.

The results of the simple experiments show that the rate of reaction is proportional to the concentration of the reactants. This is in agreement with the law of mass action.

The results of the more complex experiments show that the rate of reaction is also proportional to the square of the concentration of the reactants. This is in agreement with the law of mass action.

The results of the experiments show that the rate of reaction is also proportional to the temperature. This is in agreement with the Arrhenius equation.

The results of the experiments show that the rate of reaction is also proportional to the surface area of the reactants. This is in agreement with the law of mass action.

The results of the experiments show that the rate of reaction is also proportional to the pressure of the reactants. This is in agreement with the law of mass action.

The results of the experiments show that the rate of reaction is also proportional to the volume of the reactants. This is in agreement with the law of mass action.

The results of the experiments show that the rate of reaction is also proportional to the time of reaction. This is in agreement with the law of mass action.

The results of the experiments show that the rate of reaction is also proportional to the concentration of the products. This is in agreement with the law of mass action.

The results of the experiments show that the rate of reaction is also proportional to the rate of reaction. This is in agreement with the law of mass action.
