

ECONOMIC INFORMATION

The information in this section was prepared by the Massachusetts State Data Center (MassSDC) at the University of Massachusetts Donahue Institute and may be relevant in evaluating the economic and financial condition and prospects of the Commonwealth of Massachusetts. The State Data Center archives much of the data about Massachusetts. The demographic information and statistical data, which have been obtained by the MassSDC from the sources indicated, do not necessarily present all factors that may have a bearing on the Commonwealth's fiscal and economic affairs.

All information is presented on a calendar-year basis unless otherwise indicated. **The section was prepared for release on October 27, 2006. Information in the text, tables, charts, and graphs was current as of September 30, 2006.** Sources of information are indicated in the text or immediately following the charts and tables, and also on the *Sources List* on the last page of the Exhibit A section. Although the Commonwealth considers the sources to be reliable, the Commonwealth has made no independent verification of the information presented herein and does not warrant its accuracy.

Statistical Overview

Population (p. A-2)

	<u>Massachusetts</u>	<u>United States</u>
Estimated Percent Change in Population, April 1, 2000–July 1, 2005	0.8%	5.3%

Personal Income, Consumer Prices, and Poverty (p. A-7)

Per Capita Personal Income, 2005	\$43,702	\$34,495
Average Annual Pay, All Industries, 2005	\$50,087	\$40,671
Percent Change in CPI-U, 2004-2005*	3.3%	3.4%
Percent Change in CPI-U, July 2005-July 2006*	3.6%	4.1%
Poverty Rate, 2003-2005 Average	9.9%	12.6%
Average Weekly Earnings, Manufacturing Production Workers: 2006ytd (8mo.)	\$735.95	\$690.64
Percent Change 2006ytd (Aug06 prelim.), over same period last year	1.1%	3.3%

Employment (p. A-15)

Percent Change in Nonfarm Payroll Employment, Aug. 2005-Aug. 2006(p)	0.7%	1.3%
Unemployment Rate, 2005	4.8%	5.1%
Unemployment Rate, August, 2006 (seasonally adjusted)	4.9%	4.7%

Economic Base and Performance (p. A-21)

Percent Change in Gross State Product, 2004-2005	5.1%	6.4%
Percent Change in International Exports, 2004-2005	0.9%	10.6%
Percent Change in Housing Permits Authorized, 2004-2005	9.2%	4.1%

Human Resources and Infrastructure (p. A-39)

Expenditure Per Pupil, 2004	\$10,693	\$8,287
Percent of Adults with a Bachelor's Degree or higher, 2005	36.9%	27.2%

* NOTE: Percent changes in the CPI-U are for the Boston area & the U.S.

Massachusetts is a densely populated state with a well-educated population, comparatively high income levels, low rates of unemployment, and a relatively diversified economy. While the total population of Massachusetts has remained fairly stable in the last twenty-five years, significant changes have occurred in the age distribution of the population: dramatic growth in residents between the ages of 20 and 44 since 1980 is expected to lead to a population distributed more heavily in the 65 and over age group in the next twenty-five years. Just as the working-age population has increased, income levels in Massachusetts since 1980 have grown significantly more than the national average, and a variety of measures of income show that Massachusetts residents have significantly higher amounts of annual income than the national average. These higher levels of income have been accompanied by a significantly lower poverty rate and, with the exception of the recession of the early 1990s, considerably lower unemployment rates in Massachusetts than in the United States since 1980. The state is now recovering from the recession of 2001, but is lagging behind the nation in many indicators, particularly employment levels.

The following five sections provide detailed information on population characteristics, personal income, employment, economic base and performance, and human resources and infrastructure.

POPULATION CHARACTERISTICS

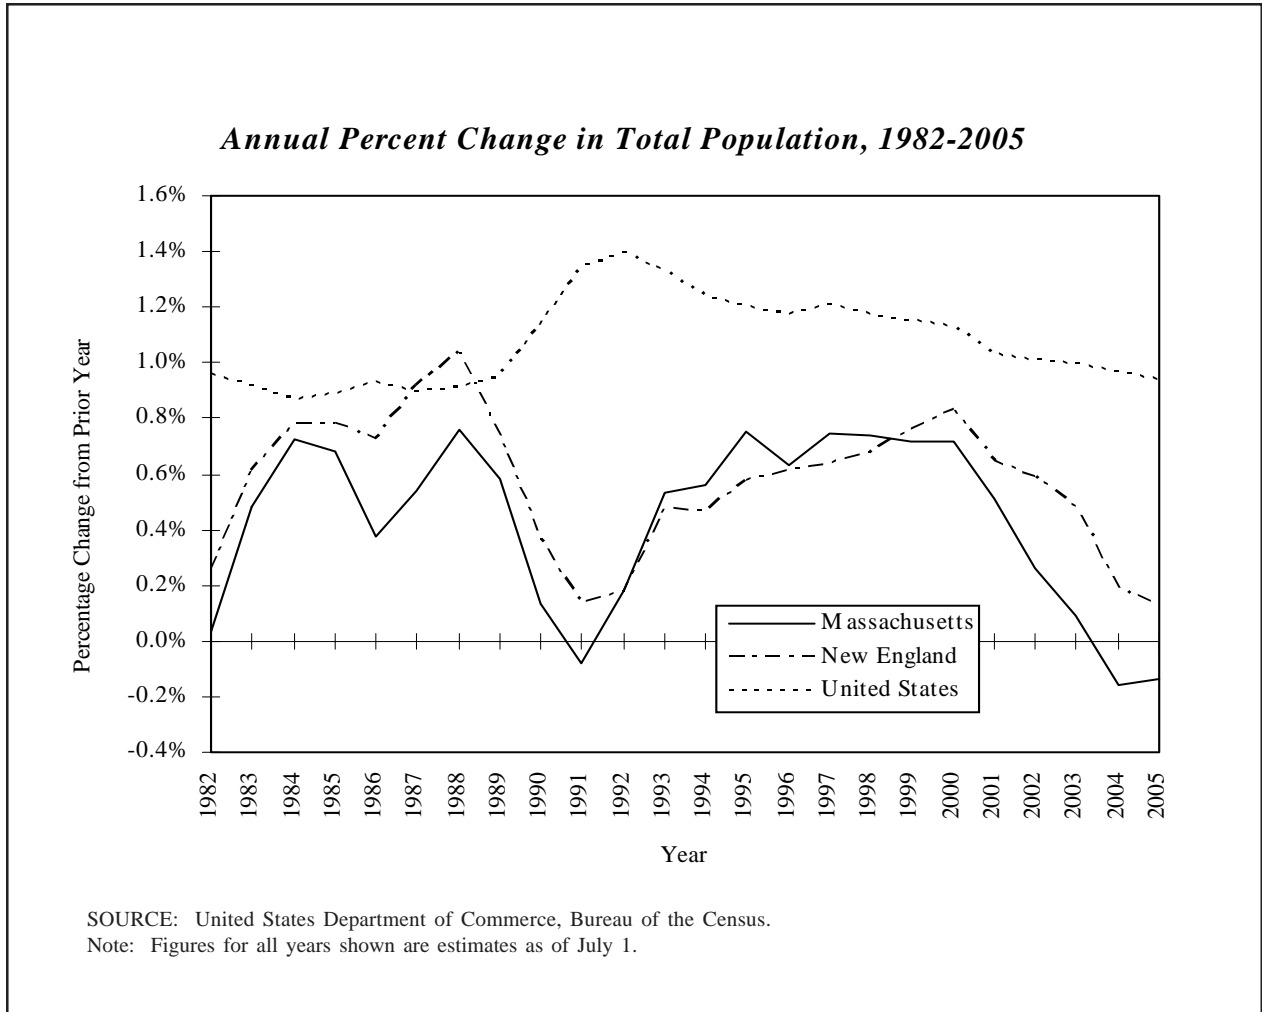

Massachusetts is a relatively slow growing but densely populated state with a comparatively large percentage of its residents living in metropolitan areas. The population density of Massachusetts was estimated as of July 1, 2005 to be 816.2 persons per square mile, as compared to 83.8 for the United States as a whole. Among the 50 states, only Rhode Island and New Jersey have a greater population density. Massachusetts also ranked just behind the same two states in percentage of residents living in metropolitan areas according to the metropolitan definitions released in 2003 which are based on whole counties. According to this new definition, the entire state is considered metropolitan except for the two island counties (99.6 percent of state residents in 2004) while Rhode Island, New Jersey and D.C. are wholly metropolitan.

The State's population is concentrated in its eastern portion. The city of Boston is the largest city in New England, with a 2005 population estimated at 559,034, or 8.7 percent of the state's population. Boston is the hub of the seven-county Boston-Cambridge-Quincy, MA-NH Metropolitan Statistical Area (MSA), which includes the two southeastern New Hampshire counties, and which had a total population in 2004 estimated at 4,424,649; over 30 percent of the total New England population. The three-county Boston-Quincy, MA Metropolitan Division is the largest component of that MSA, with a total population in 2005 estimated at 1,800,432.

The second largest MSA in the state is the Worcester, MA MSA, with a 2005 population estimated at 783,262. The city of Worcester, situated approximately 40 miles west of Boston with a 2005 population estimated at 175,898, is the third largest city in New England as well as the second largest in the state. As a major medical and educational center, the Worcester area is home to 18 patient care facilities, including the University of Massachusetts Medical School, and thirteen other colleges and universities.

The third largest MSA in Massachusetts is the three-county Springfield MSA, with a 2005 population estimated at 687,264. Springfield, the third largest city in the Commonwealth with a 2005 population estimated at 151,732, is located in the Connecticut River Valley in Western Massachusetts and enjoys a diverse body of corporate employers, the largest of which are Baystate Health System, Big Y Supermarkets, MassMutual Financial Group, and Hasbro Games (Milton Bradley). In addition, Springfield is home to three independent colleges.

As the following chart and table indicate, the population in Massachusetts generally grows more slowly than the population of New England and much more slowly than the nation as a whole. According to the Census Bureau's latest revised estimates, only the District of Columbia, North Dakota, and West Virginia have grown more slowly than Massachusetts since Census 2000, and the state has even had a slight population loss since apparently peaking in 2003.

The following table compares the population level and percentage change in the population level of Massachusetts with those of the New England states and the United States.

Population, 1972-2005

(in thousands)

<i>Year</i>	<i>Massachusetts</i>		<i>New England</i>		<i>United States</i>

SOURCE: United States Department of Commerce, Bureau of the Census. 1980 figures are census counts as of April 1, 1980; figures for all other years shown are estimates as of July 1.

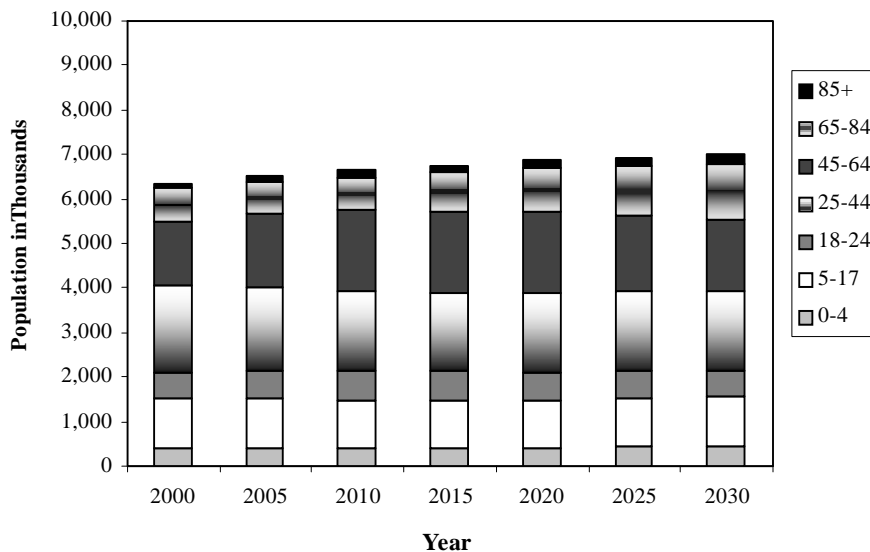

The next twenty-five years are expected to bring about a continued change in the age distribution of the Massachusetts population. As the following table and chart show, the share of the 65 and over age group and especially the 85 and over age group will continue to grow. The chart, table and population pyramids (below, and on the following page) show the projected population by age for Massachusetts for 2000 through 2030.

PERSONAL INCOME, CONSUMER PRICES, AND POVERTY

Personal Income. Since at least 1929, real and nominal per capita income levels have been consistently higher in Massachusetts than in the United States. After growing at an annual rate higher than that for the United States between 1982 and 1988, real income levels in Massachusetts declined between 1989 and 1991. Real per capita income levels in Massachusetts increased faster than the national average between 1994 and 1997. In 2000 Massachusetts had its highest per capita income growth in 16 years, exceeding the national growth rate by 2.4 percentage points. From 2000 to 2003 real income in both Massachusetts and the United States declined, with a steeper decline in Massachusetts. However, real income levels in Massachusetts remained well above the national average. In both 2004 and 2005, income in the state grew faster than in the nation. For the last thirteen years only the District of Columbia, Connecticut and New Jersey have had higher levels of per capita personal income. The following graph illustrates these changes in real per capita personal income in Massachusetts, New England, and the United States since 1970.

The following table compares per capita personal income in Massachusetts, New England, and the United States for the period 1970-2005.

Per Capita Personal Income, 1970-2005

Year	Nominal Income (in current dollars)			Real Income (in 2005 dollars)			Percent Change in Real Income

Notes: Estimated population as of July 1. Massachusetts real income is calculated using Boston CPI-U data.

Annual pay in nominal dollars has grown steadily in Massachusetts over the past decade. Average annual pay is computed by dividing the total annual payroll of employees covered by Unemployment Insurance programs by the average monthly number of employees. Data are reported by employers covered under the Unemployment Insurance programs. While levels of annual pay were nearly equal in Massachusetts and the United States in 1984, average annual pay levels in Massachusetts have grown more rapidly than the national average since that time. The level of annual pay in Massachusetts in 2005 was 23 percent higher than the national average: \$50,087 compared to \$40,671.

Wage and Salary Disbursements. Wage and Salary Disbursements by Place of Work is a component of personal income and measures monetary disbursements to employees. This includes compensation of corporate officers, commissions, tips, bonuses, and receipts in-kind. Although the data is recorded on a place-of-work basis, it is then adjusted to a place-of-residence basis so that the personal income of the recipients whose place of residence differs from their place of work will be correctly assigned to their state of residence. The table below details Wage and Salary Disbursements since 1990. Between 1991 and 2000, Massachusetts shares of the New England and overall US totals steadily increased, but in the subsequent years, its shares have dropped back somewhat from their 2000 peaks.

Consumer Prices. Higher income levels in Massachusetts relative to the rest of the United States are offset to some extent by the higher cost of living in Massachusetts. The following table presents consumer price trends for the Boston metropolitan area and the United States for the period between 1970 and 2005. The table shows the annual average of the Consumer Price Index for All Urban Consumers (CPI-U) and the percentage change in that average from the previous year. In 2005, the CPI-U for Boston increased by 3.3 percent over the average for the previous calendar year, while the index for the United States as a whole increased by a comparable 3.4 percent. The latest available data for July 2006 show that the CPI-U for the Boston metropolitan area grew at a rate of 3.6 percent from July 2005, compared with 4.1 percent for the U.S.

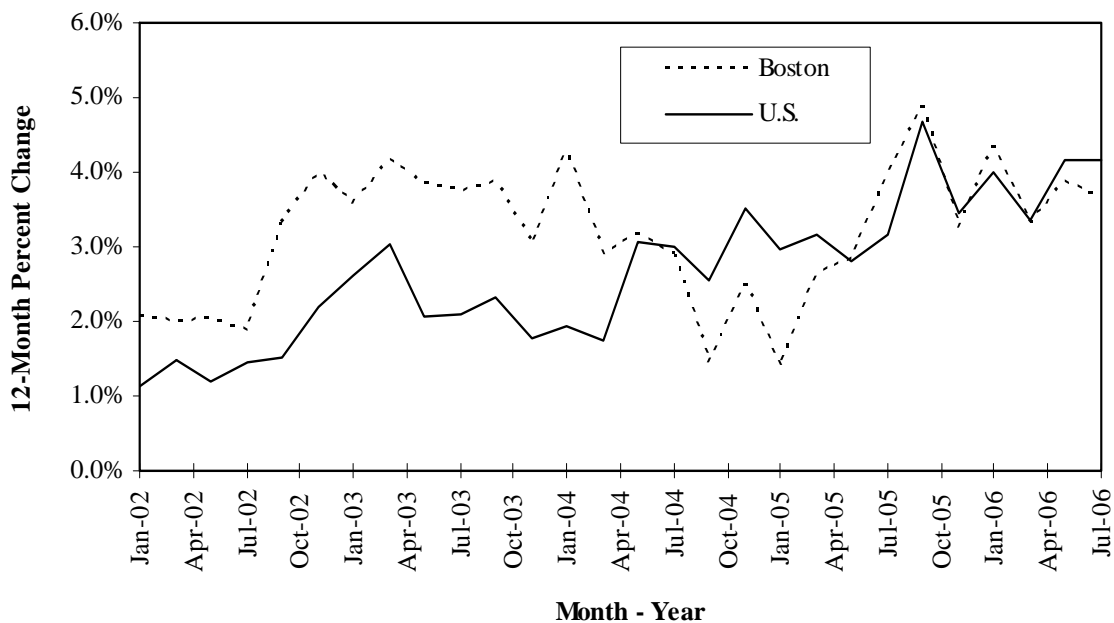

Consumer Price Index for all Urban Consumers (CPI-U), 1970-2005

(not seasonally adjusted, (1982-1984=100))

Consumer Confidence, Present Situation, and Future Expectations. These three measures offer multiple insights into consumer attitudes. The U.S. and New England measures are compiled from a national monthly survey of 5,000 households and are published by The Conference Board, Inc. The survey for Massachusetts is conducted in a similar manner and the results are published by the Mass Insight Corporation, based on quarterly polling of 500 adult residents of Massachusetts. The "Present Situation" index measures consumers' appraisal of business and employment conditions at the time of the survey. The "Future Expectations" index focuses on consumers' expectations six months hence regarding business and employment conditions, as well as expected family income. The overall "Consumer Confidence" index is a weighted average of the two sub-indices. Although the U.S. and New England measures are compiled by a different source than the Massachusetts measures, according to the Federal Reserve Bank of Boston the numbers are generally comparable. While consumer confidence nationally remained near its four-year high point at 107 in July as reported by the Conference Board, Massachusetts' consumer confidence remained at 76, its lowest level since January 2003, according to the Mass Insight Corporation quarterly survey. The overall 30-plus point gap between state and national consumer confidence is the largest in more than a decade. A score of 100 is considered neutral. The following table and chart detail the recent record of these three measures.

Poverty. The Massachusetts poverty rate remains well below the national average. Since 1980, the percentage of the Massachusetts population below the poverty line has varied between 7.7 percent and 12.2 percent. During the same time, the national poverty rate varied between 11.3 percent and 15.1 percent. In 2005, the estimated poverty rate in Massachusetts increased to 10.1 percent while the poverty rate in the United States dropped slightly to 12.6 percent. These official poverty estimates are based on a sample of households and are not adjusted for regional differences in the cost of living. The following chart illustrates the lower poverty rates in Massachusetts (1985 - 2005) compared with the national average during similar periods. Poverty estimates for states are not as reliable as national estimates. One should use caution when comparing poverty rate estimates across states, or poverty rates for the same state across years, because their variability is high. In particular the estimated rates for Massachusetts are based on a sample of fewer than two thousand households, and the apparent 2005 increase is not considered large enough to be statistically significant.

Transfer Payments. Transfer payment income is payment to individuals from all levels of government and from businesses, for which no current services are performed, including payments to nonprofit institutions serving individuals. These payments accounted for more than 14 percent of total personal income in Massachusetts in 2005. The chart below does not include transfer payments from business or payments to non-profit organizations. Total transfer payments to individuals in Massachusetts from governments & businesses totaled 38.6 billion dollars for 2005. Over 51 percent of government transfer payments to individuals were medical payments.

***Transfer Payments from Governments to Individuals in
Massachusetts in 2005***
(From Annual State Personal Income Estimates)

(in thousands of current dollars)

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis.

NOTE: The category "other" includes veterans' benefit payments, federal education and training assistance payments, and a small residual of miscellaneous other payments to individuals.

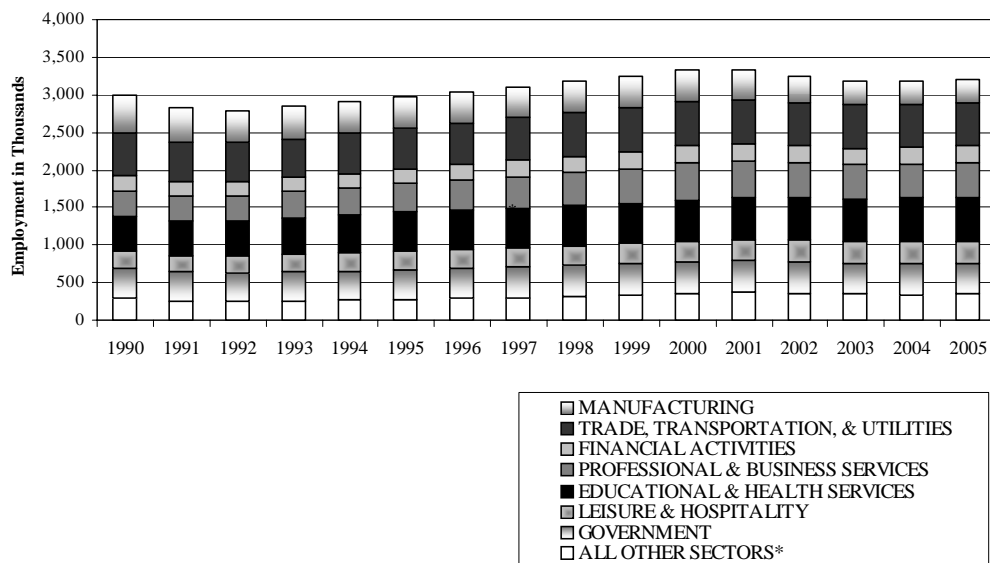

EMPLOYMENT

Employment by Industry The chart on this page shows the annual level of non-agricultural payroll employment in Massachusetts on the North American Industry Classification System (NAICS) basis for the seven largest NAICS supersectors starting with 1990, the earliest year for which NAICS data are available. The chart on the following page compares the super-sector shares for the 2004-2005 period with the corresponding shares for the 1990-1991 period. Like many industrial states, Massachusetts has seen a steady decline of its manufacturing jobs base over the last two decades, not only as a share of total employment, but in absolute numbers of jobs as well. Several NAICS service sectors and the Financial Activities sector have grown to take the place of manufacturing in driving the Massachusetts economy and now account for more than half of total payroll employment, while Government, Information, Trade, Transportation & Utilities have remained level or declined in share.

After significant declines in 2002 and 2003, total non-agricultural employment in Massachusetts declined only 0.1 percent in 2004. The 2005 increase of 0.5 percent is equal to the average growth rate over the 16 year period for which NAICS data are available, but still leaves the state with 131.7 thousand fewer jobs than in the peak year of 2001. The average level for the first eight months of 2006 is a somewhat healthier 0.8 percent above that of the corresponding eight-month period in 2005. The comparable growth rate for the nation over the same period is 1.5 percent.

In 2004, manufacturing employment declined 3.2 percent from the year before; a smaller decline than the steep annual declines in the previous three years and very close to the long-term average rate of decline since 1990 (3.0 percent per year). The estimate for manufacturing for 2005 is only 2.3 percent below the 2004 level, and the eight-month average for 2006 to date is in fact only 0.4 percent below the comparable 2005 level. If this trend continues through the entire year, 2006 will be the best year for manufacturing in Massachusetts since 1998.

Unemployment. The economic recession of the early 1990s caused unemployment rates in Massachusetts to rise significantly above the national average, as much as 2.1 points above in 1991. However, from 1995 until the beginning of 2006 the unemployment rate in Massachusetts has been consistently below the national average. Since January, 2006 the state rate has been above the national rate in every month except July. The following table compares the annual civilian labor force, the number unemployed, and the unemployment rates of Massachusetts, the New England states, and the United States from 1970 to 2005 and also includes preliminary data for the first eight months of 2006.

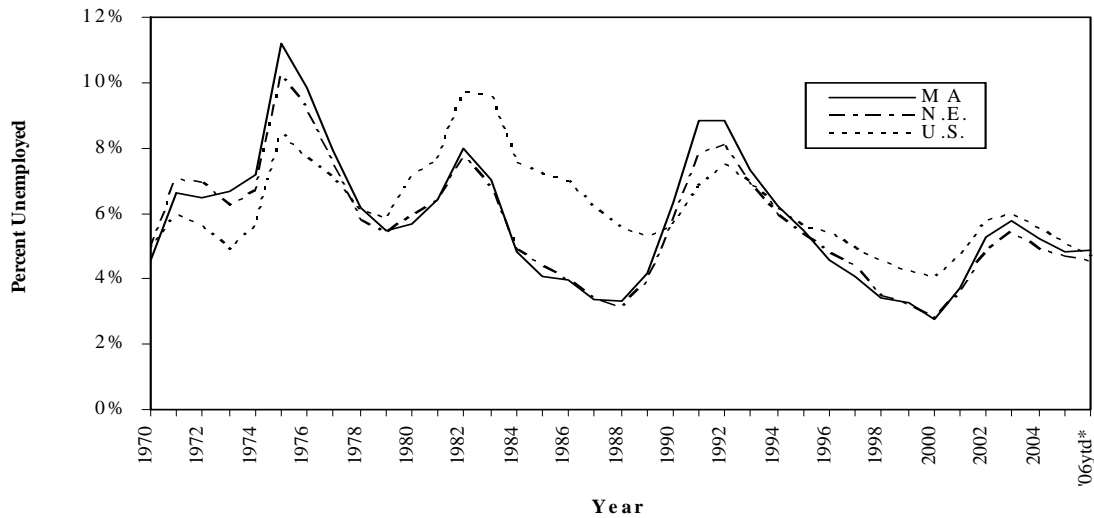

Annual Average Civilian Labor Force and Unemployment, 1970 - 2005

**Annual Average Unemployment Rate, 1970 -2005,
Massachusetts, New England, and United States**

SOURCE: United States Department of Labor, Bureau of Labor Statistics. *Estimates for the first eight months of 2006 calculated from Seasonally Adjusted monthly data.

The unemployment rate in Massachusetts was consistently below the national average from mid-1995 to January, 2006, with the exception of December, 2003, when the two rates were equal. Unemployment levels in the United States as a whole and in Massachusetts have generally shown similar patterns since peaking in mid-2003, falling slowly but fairly steadily through January, 2006. The unemployment rate in Massachusetts dropped from 4.9 to 4.6 percent between January, 2005 and January, 2006, while the national rate dropped from 5.2 to 4.7 percent. Both rates worsened in February, 2006, and the Massachusetts rate has now been higher than the U.S. rate for six of the last seven months. The following graph illustrates the movement of the state and national unemployment rates over the past forty-four months.

Help Wanted Advertising Index. This index is an additional measure of the employment conditions in various regions across the country and for the nation as a whole. Compiled by The Conference Board, Inc., the index is based on the volume of help wanted advertising in 51 major newspapers across the country whose circulation covers about half of the country's nonagricultural employment. The index is compiled for each of the 51 markets, then weighted into regional averages which are then weighted into the national index. The index is intended to be a proxy measure for labor demand. According to the Conference Board, Inc., rising trends in want-ad volume have generally corresponded to improved labor market conditions and declining volume has indicated a decline in new employment.

Unemployment Insurance Trust Fund. The unemployment insurance system is a federal-state cooperative program established by the Social Security Act and the Federal Unemployment Tax Act to provide for the payment of benefits to eligible individuals when they become unemployed through no fault of their own. Benefits are paid from the Commonwealth's Unemployment Insurance Trust Fund, financed through employer contributions. The assets and liabilities of the Commonwealth Unemployment Insurance Trust Fund are not assets and liabilities of the Commonwealth. As of August 31, 2006, the Massachusetts Unemployment Trust Fund had a balance of \$1.051 billion, of which the private contributory account portion was \$944 million. The Division of Unemployment Assistance's August 2006 Unemployment Insurance Trust Fund report indicates that under the current economic outlook the refinancing measures included in Chapter 142 of the Massachusetts Acts of 2003 (effective January 1, 2004), provide for employer contributions that should result in private contributory account reserves of \$2.002 billion at the end of 2010.

ECONOMIC BASE AND PERFORMANCE

According to the Bureau of Economic Analysis, Gross State Product (GSP) is the value added in production by the labor and property located in a state. GSP for a State is derived as the sum of the gross state product originating in all industries in a State. In concept, an industry's GSP, referred to as its "value added", is equivalent to its gross output (sales or receipts and other operating income, commodity taxes, and inventory change) minus its intermediate inputs (consumption of goods and services purchased from other U.S. industries or imported). Thus, GSP is often considered the state counterpart of the nation's gross domestic product (GDP), Bureau of Economic Analysis's featured measure of U.S. output.

Real GSP is an inflation-adjusted measure of each state's gross product that is based on national prices for the goods and services produced within that state. The estimates of real GSP and of quantity indexes with a base year of 2000 are derived by applying national implicit price deflators to the current-dollar GSP estimates for the 63 SIC industries for years 1977-1997, and for the 81 NAICS industries for years 1997 forward. Then, the chain-type index formula that is used in the national accounts is used to calculate the estimates of total real GSP and of real GSP at more aggregated industry levels.

Between 1997 and 2005, gross state product in Massachusetts, New England and the sum of all states GSP grew approximately 48.1, 46.8 and 50.6 percent respectively in current dollars. Between 1997 and 2005, gross state product in Massachusetts, New England and the sum of all states GSP grew approximately 28.6, 25.1 and 25.1 percent respectively in chained 2000 dollars. The Massachusetts economy is the largest in New England, contributing 47.6 percent to New England's total GSP, and thirteenth largest in the U.S., contributing 2.6 percent to the nation's total GSP.

The commercial base of Massachusetts is anchored by the twenty-four 2005 Fortune 1000 companies (eleven of which are Fortune 500) headquartered in Massachusetts. Exiting the Massachusetts 2004 Fortune 500 list after being purchased by companies headquartered outside Massachusetts were FleetBoston (140th) and John Hancock Financial Services (192nd). The 2006 Fortune 500 list for Massachusetts will not include Gillette as it was purchased by Ohio based Procter and Gamble (26th) in January 2005. Allmerica Financial lost its Fortune 500 ranking, joining the Fortune 1000 (550th). When comparing the 2005 Fortune 500 to 2004's, five Massachusetts companies gained and seven lost rank. Perini, the Framingham based construction services firm and Fortune 1000 member, climbed 111 places on the list (from 910th to 799th); the largest leap for a Massachusetts company.

ECONOMIC BASE AND PERFORMANCE - SECTOR DETAIL (NAICS BASIS)

The Massachusetts economy remains diversified among several industrial and non-industrial sectors. The four largest sectors of the economy (manufacturing, real estate and rental and leasing, finance and insurance, and professional and technical services, on the 2002 NAICS basis) contributed 48.8 percent of the GSP in 2004. The data below show the contributions to the Massachusetts Real Gross State Product of all industrial and non-industrial sectors.

When measured in chained 2000 dollars, the cumulative change in Massachusetts total GSP was 28.0 percent between 1997 and 2004. Between 1997 and 2003 (the latest data available for subsector data), several industries grew much faster than the state average; computer and electronic product manufacturing, securities/commodity contracts/investments, and forestry/fishing/related activities. Substantial cumulative losses were in the paper manufacturing, machinery manufacturing, and funds/trusts/other financial vehicles sectors. Industry subsectors that experienced substantial cumulative growth or reduction and accounted for one percent or more of Massachusetts GSP are listed in the following chart:

Industry Subsectors with a Substantial Growth or Reduction
(chained 2000 dollars)

NAICS* Industry Subsector	Cumulative percent change 1997-2004
Computer and electronic product manufacturing	352.9%
Securities, commodity contracts, investments	220.8%
Forestry, fishing, and related activities	175.0%
Motor vehicle, body, trailer, and parts manufacturing	123.8%
Mining, except oil and gas	111.9%
Textile and textile product mills	-30.6%
Paper manufacturing	-36.8%
Apparel manufacturing	-48.5%

1998 data omitted due to space constraints

Between 1997 and 2004, the portion of the total GSP in chained 2000 dollars, from the private industry sector increased 2.0 percent while it decreased 2.0 percent in the government sector. Contributions by each industry to total GSP have remained steady for most sectors. The exceptions were finance and insurance (+3.1 percent, and manufacturing +2.4 percent). When the 1997 to 2004 industry contributions to total annual GSP are ranked according to their dollar value, the top five have remained constant; real estate, rental and leasing, manufacturing, finance and insurance, professional and technical services, and government.

Trade and International Trade. Massachusetts ranked 10th in the United States, and first in New England, with \$22.04 billion in international exports in 2005. This represents a 0.9 percent increase from the previous year's exports from the Commonwealth, while national exports increased by 10.6 percent in the same period. Through July 2006, Massachusetts's exports totaled \$13.71 billion, an increase of 7.2 percent compared with exports in the first seven months of 2005. National exports were up 13.9 percent and New England, 12.5 percent during the same period. It is not possible to provide balance of trade comparisons for Massachusetts because import data are not compiled on a state-by-state basis.

Massachusetts' five most important trading partners for 2005 were: the Netherlands, with \$3.00 billion in purchases of Massachusetts exports; Canada, with \$2.93; Germany, with \$2.15 billion; Japan, with \$1.90 billion; and the United Kingdom, with \$1.63 billion in purchases. Between 2004 and 2005, the most significant growth in Massachusetts's exports among its top ten trading partners was in exports to South Korea (23.0 percent) and the Netherlands (19.3 percent).

Massachusetts' most important exports, as shown in the following chart, are computer and electronic products, chemical products, and non-electrical machinery. These categories reflect the adoption of the NAICS classification system, which groups computers with electronic products, rather than with machinery.

Value of International Shipments from Massachusetts, 1998-2005

(top ten industry groups ranked by value of 2005 exports, in millions)

Major Industry Group	1998	1999	2000	2001	2002	2003	2004	2005
Computer And Electronic Products	\$7,458	\$8,056	\$10,215	\$8,122	\$7,024	\$7,688	\$7,475	\$7,004
Chemicals	\$1,223	\$1,357	\$1,600	\$1,534	\$2,267	\$3,216	\$4,907	\$5,284
Machinery, Except Electrical	\$1,694	\$1,705	\$2,545	\$2,044	\$1,786	\$1,668	\$2,456	\$2,315
Miscellaneous Manufactured Commodities	\$835	\$925	\$1,053	\$1,213	\$1,210	\$1,571	\$1,927	\$2,111
Electrical Equipment, Appliances, And Component	\$596	\$720	\$834	\$691	\$649	\$592	\$752	\$815
Fabricated Metal Products, Nesoi	\$597	\$601	\$649	\$569	\$692	\$539	\$621	\$664
Transportation Equipment	\$637	\$698	\$659	\$449	\$346	\$383	\$453	\$481

SOURCE: World Institute for Strategic Economic Research (WISER). These figures reflect the changeover in export statistics reporting to the NAICS system from the SIC system. Categories and state totals are not comparable between systems. Pre-1997 data is not available.

Transportation and Warehousing, and Utilities. Between 1997 and 2004, the combined real gross state product of the transportation and warehousing and utilities sector increased 9.4 percent when measured with year 2000 chained dollars. These combined sectors contributed 2.8 percent to the total Massachusetts Real Gross State Product in 2004, a 0.6 percent less than it did in 1997.

Massachusetts's major air and seaports are managed by the Massachusetts Port Authority (Massport), an independent public authority. Massport reported fiscal 2005 operating income of \$39.9 million (up 18.5 percent from fiscal 2004), with operating revenues up 11.0 percent (\$460.6 million in 2005 versus \$415.0 million in 2004) and operating costs up 10 percent (\$420.6 million in 2005 versus \$381.3 million in 2004).

According to Massport, as of June 30, 2005, airline service at Logan, both scheduled and unscheduled, was provided by 78 airlines, including 6 U.S. major air carrier airlines, 33 other domestic carriers, 19 non-U.S. flag carriers, and 20 regional and commuter airlines. Based on total passenger volume in calendar year 2005 data, Logan Airport was the most active airport in New England but dropped from 18th in 2004 to 19th most active in the U.S. according to the Federal Aviation Authority. Massport reported that as of August, year-to-date 2006, Logan flights and passenger counts were down 2.5 and up 2.1 percent respectively compared to the same period in 2005.

As of June 30, 2004, Logan was served by 8 all-cargo and small package/express carriers. According to the FAA, Logan Airport ranked 26th in the nation in total air cargo volume in calendar year 2004. In 2004, the airport handled 1.2 billion pounds of cargo, a 2.3 percent decrease from 2003. Massport reported that as of August, year-to-date 2006, the combined cargo and mail volume was down 7.8 percent from the same period in 2005. Please refer to the Aviation Activity charts on the following page.

At Massport's Port of Boston properties, 2005 cargo throughput was 16.4 million metric tons (an 18 percent increase from 2004), automobile processing remained nearly unchanged at 10,956 units, and cruise passenger trips increased 17 percent to 233,702. From August 2005 to July 2006, total containerized cargo increased 8.5 percent, there were 23.4 percent more cruise passengers and 0.7 percent more automobiles processed, when compared to August 2004 to July 2005. The Army Corps of Engineers reported Massachusetts total waterborne cargo shipped or received in 2004, increased 3.7 percent to 31,787,000 short tons, from 2003. Waterborne cargo in New England and the U.S. increased 3.7 and 6.6 percent respectively. Please refer to the Waterborn Tonnage by State charts on the following page.

Construction and Housing. In 2004, construction activity contributed 4.3 percent to the total Massachusetts Gross State Product when measured in 2000 chained dollars. The construction sector contributed 4.5 percent to state GSP in 1997. Overall growth between 1997 and 2004 was 24.6 percent.

The following table shows the number of housing permits authorized on an annual basis in Massachusetts, New England, and the United States.

Housing Permits Authorized, 1969-2005

Both the economic recession of 1990-1991 and the subsequent economic recovery were strongly reflected in the Massachusetts housing sector, but the recession that began in 2001 has had a less pronounced impact on home sales. Significant declines in existing home sales in Massachusetts in 1989 and 1990 (of 10.9 percent and 28.8 percent, respectively) were followed by rapid sales growth between 1991 and 1993, when home sales in Massachusetts increased at a yearly rate substantially higher than the national average. Following this period of rapid growth, the growth in existing home sales slowed to a rate of 0.7 percent in 1994 and declined 2.6 percent in 1995. In 1996, 1997, and 1998, however, growth in existing home sales in Massachusetts was significant, outpacing the New England and national average in 1996 and 1997 with rates of 16.6 percent and 11.0 percent, respectively. This strong growth ended in 1999 when existing home sales in the Commonwealth declined 1.3 percent while growth in existing home sales nationally was 6.0 percent. In 2000, existing home sales in Massachusetts declined by 10 percent and did not start growing again until 2002 when they surged 32.5 percent. On a seasonally adjusted annual basis, existing home sales for the Commonwealth, New England, and the United States appear in the following table.

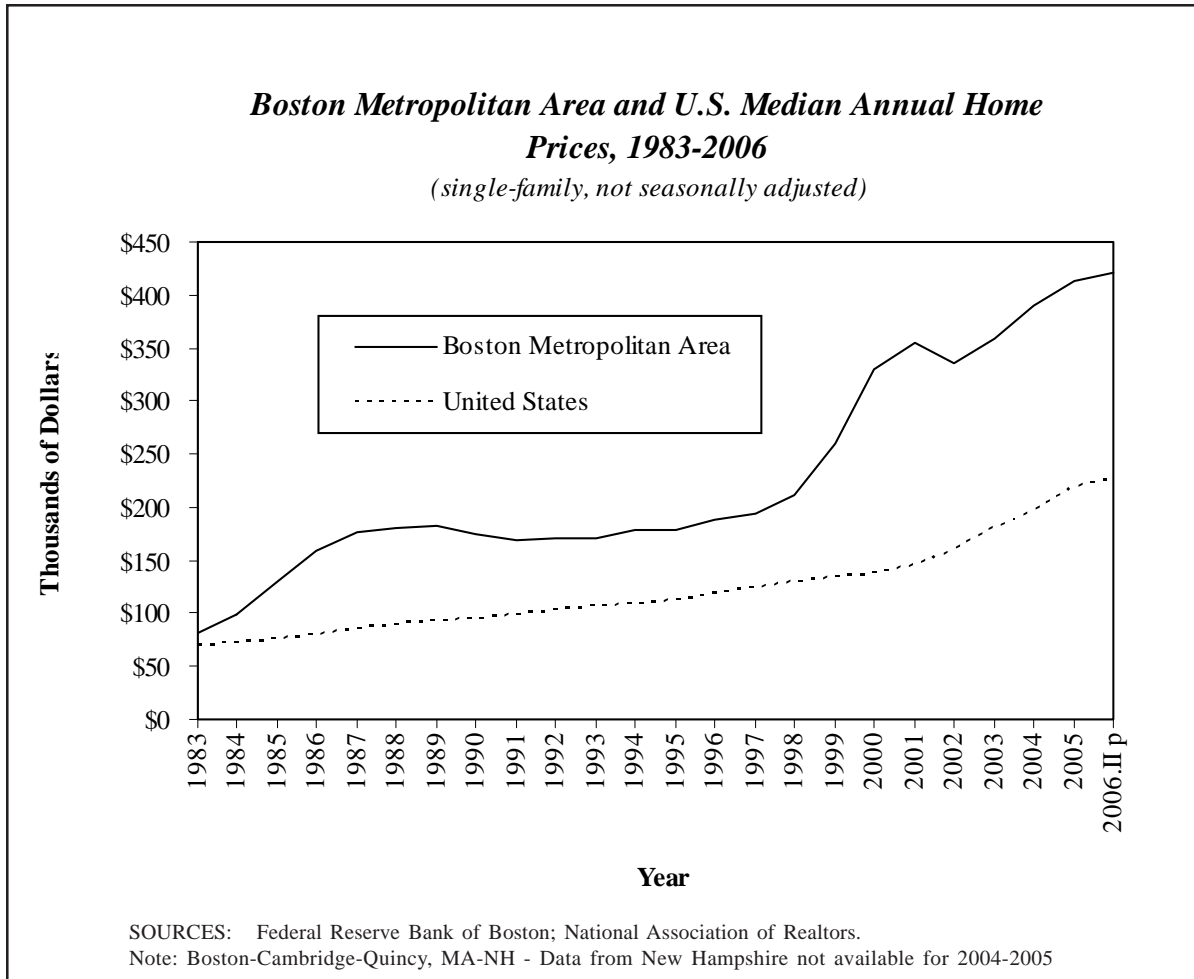

Existing Home Sales, 1981-2006

(seasonally adjusted annual rates, in thousands)

Median single-family home prices for the Boston Metropolitan area and the U.S. from 1983 to 2004 are compared in the following graph. While Boston housing prices were 118.1 percent of the U.S. median in 1983, by 1987 Boston housing prices as a percent of the national median had reached 205.7 percent. After dipping to 160.9 percent of the median in 1993 and remaining as low as 162.9 percent in 1998, Boston home prices soared to 211.7 percent of the national median in 2004. The Boston metropolitan area median home price rose to \$389,700 in 2004, compared to the national home price of \$184,100. The third quarter 2005 preliminary median prices were \$215,900 for the U.S. and \$430,900 for the Boston metro. This was a 14.7 percent increase for the U.S. and a 5.5 percent increase for the Boston metro, when compared to their third quarter 2004 prices. The September 2005 revisions reflect new metropolitan statistical area definitions from the U.S. Census Bureau.

Defense. Following a peak at \$8.7 billion in the value of military prime contracts awarded to Massachusetts firms in fiscal 1986, defense-related contracts declined 17.2 percent by fiscal 1988 to \$7.2 billion. By fiscal 1995, the value of defense-related prime contracts had declined to \$4.8 billion. The net value of prime contract awards in Massachusetts oscillated between \$4.2 and \$5.2 billion from 1995 to 2002, but jumped 29.2 percent from 2002 to 2004 to \$7.0 billion. The chart below illustrates the yearly changes in the value of Massachusetts military prime contracts from 1980 to 2004.

The importance of the defense industry to the Massachusetts economy is reflected in table on the following page, which shows the value of Department of Defense prime contract awards between 1980 and 2004. From the early 1980s to 2001, the Commonwealth's share of New England's prime contract awards had remained around 50 percent. While Massachusetts' contract total has increased significantly in the past two years, its share in the New England region has slipped to 36.5 percent in 2004. In 2002, the Commonwealth's share of the national total reached its lowest point in over two decades, 3.1 percent, and has increased only slightly to 3.3 percent in 2004. Despite this trend, Massachusetts remains the eighth largest recipient in defense spending.

Net Value of Department of Defense Prime Contract Awards, 1980-2005

SOURCE: United States Department of Defense. *Prime Contract is defined as \$10,000 and above for these years; beginning in 1983 it is defined as \$25,000 and above.

Travel and Tourism. The travel and tourism industry represents a important component of the overall Massachusetts economy. Massachusetts is one of the nation's most popular tourist and travel destinations for both domestic and international visitors. The greater Boston area is New England's most popular destination, as the site of many popular and historic attractions including the New England Aquarium, Boston's Museum of Fine Arts, Boston's Museum of Science, the U.S.S. Constitution, the Kennedy Library and Museum, and Faneuil Hall Marketplace. While the Massachusetts Office of Travel and Tourism reported a slight drop, 3.7 percent, in museum and attraction attendance in May 2006 compared to May 2005, year-to-date attendance, 3,941,075 thru May 2006 is up over 10 percent compared to the same period in 2005.

The Massachusetts Office of Travel and Tourism estimates that 22.7 million domestic travelers traveled to or within the Commonwealth in 2005, an increase of 4.1 percent from 2004. Additionally, 4.23 million international travelers visited Massachusetts in 2005, an increase of 0.8 percent from 2004. According to MassPort, there were 7 percent more cruise vessel calls in 2005 than in 2004, 102 versus 95 and 17 percent more cruise passengers, 233,702 versus 199,453.

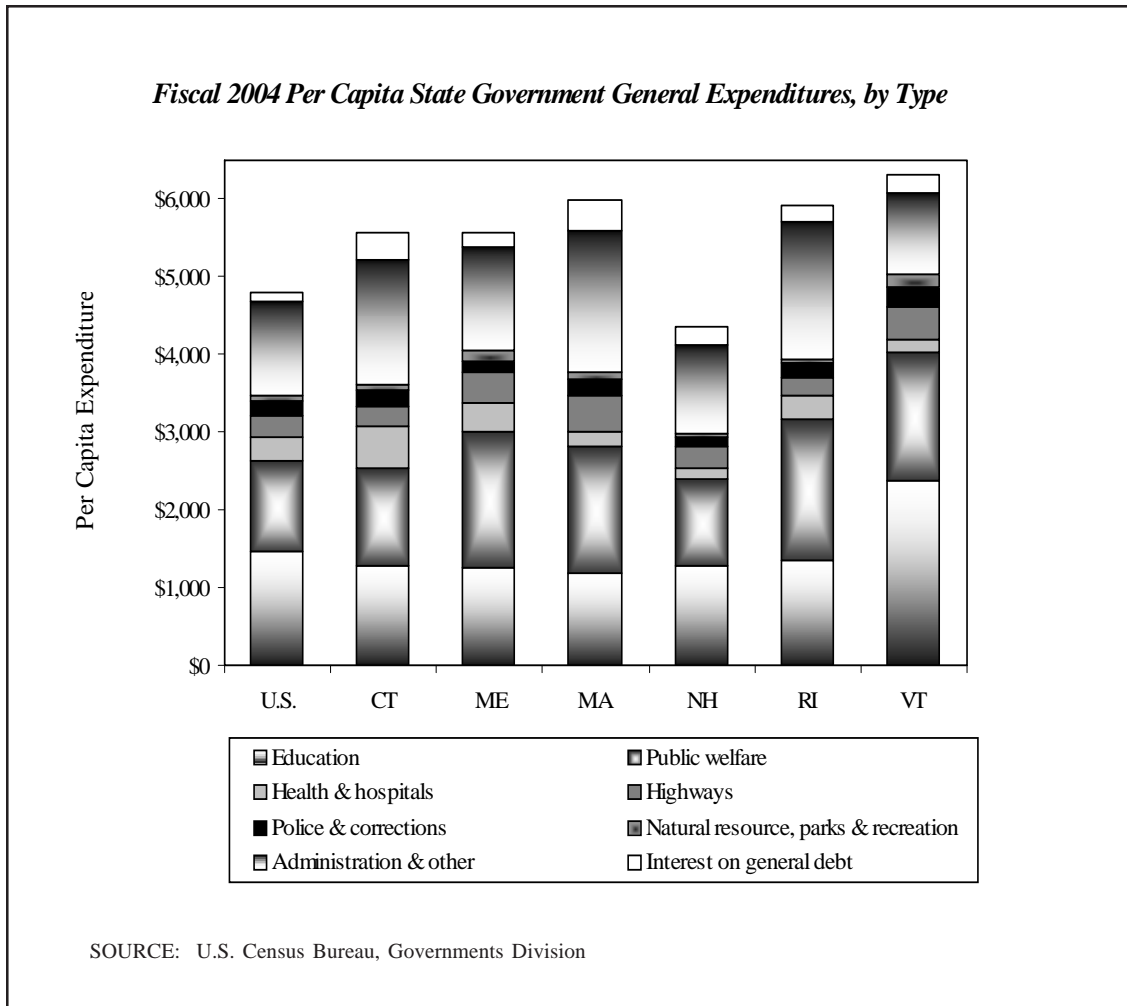

State Taxes. Per capita state taxes in Massachusetts are significantly higher, 28.4 percent, than the national average. In 2005, the total per capita state tax bill in the United States was \$2,192. Citizens of the Commonwealth however, paid \$2,815 on average, the seventh highest in the nation and an increase of 8.2 percent from the previous year's \$2,602. In New England, citizens in Connecticut and Vermont paid more per capita, and all New England states except New Hampshire (48th), ranked in the top 19 for per capita state tax collections.

In 2005, over half (53.8 percent) of the state taxes in Massachusetts came from the state income tax. Per capita individual income taxes in Massachusetts were \$1,514, up 10.0 percent from \$1,376 in 2004. Also increasing in 2005 were sales receipts, 6.2 percent, corporate net income, 2.7 percent, and other taxes (licenses, death and gift, and documentary and stock transfer) 9.7 percent. Across the New England states, there is wide variation in both total per capita state taxes and in the breakdown of those taxes, as illustrated in the following chart.

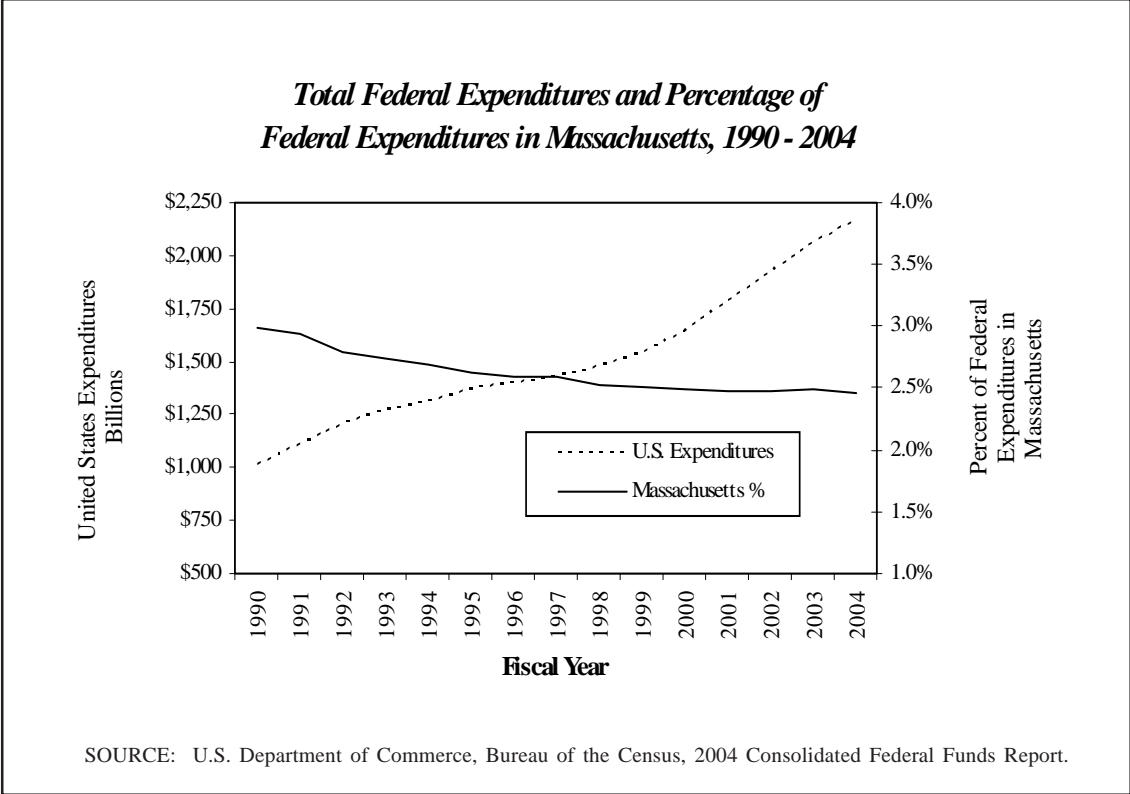

State Government Spending in Massachusetts. The following chart depicts fiscal 2004 per capita state general expenditures by category for the six New England states and the U.S. average state expenditure. Massachusetts ranked 7th in the nation in per capita expenditures (\$5,994) in 2004 while it ranked 16th and spent less (\$5,095) in 2003. This represents a 17.7 percent increase in per capita expenditures from 2003 to 2004.

Massachusetts spent more state funds per capita on highways (\$471), debt service (\$401) and parks (\$48) and less on education (\$1,183) in 2004 than any of its New England neighbors. Massachusetts spent 3.8 percent more on debt service and 12.2 percent more on education in 2004 than 2003. While all New England states used less than the national average of 27.7 percent for intergovernmental expenditures, the variation within the region is significant, with intergovernmental expenditures representing 13.6 percent of Rhode Island expenditures, 16.2 percent of Massachusetts expenditures, and 25.1 percent of Vermont expenditures in 2004.

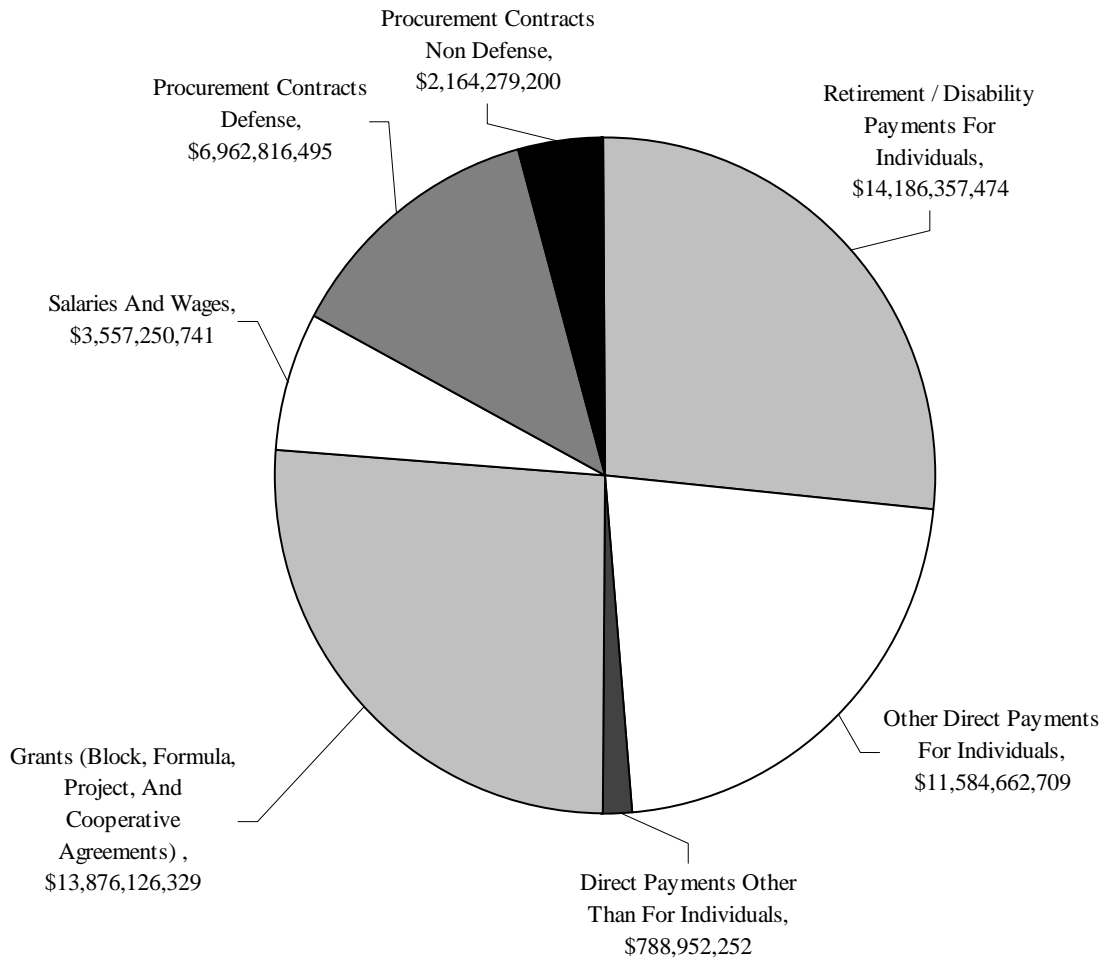

Federal Government Spending in Massachusetts. Federal government spending contributes significantly to the Massachusetts economy. In fiscal 2004, Massachusetts ranked twelfth among states in per capita distribution of federal funds, with total spending of \$8,279 per person, excluding loans and insurance. Massachusetts' share of total federal spending declined steadily between 1990 and 1999, and has stabilized in the range of 2.46 percent to 2.52 percent between 1998 and 2004. The following chart shows total federal expenditures and the percentage of federal expenditures in Massachusetts. Federal spending includes grants to state and local governments, direct payments to individuals, wage and salary employment, and procurement contracts, and includes only those expenditures that can be associated with individual states and territories.

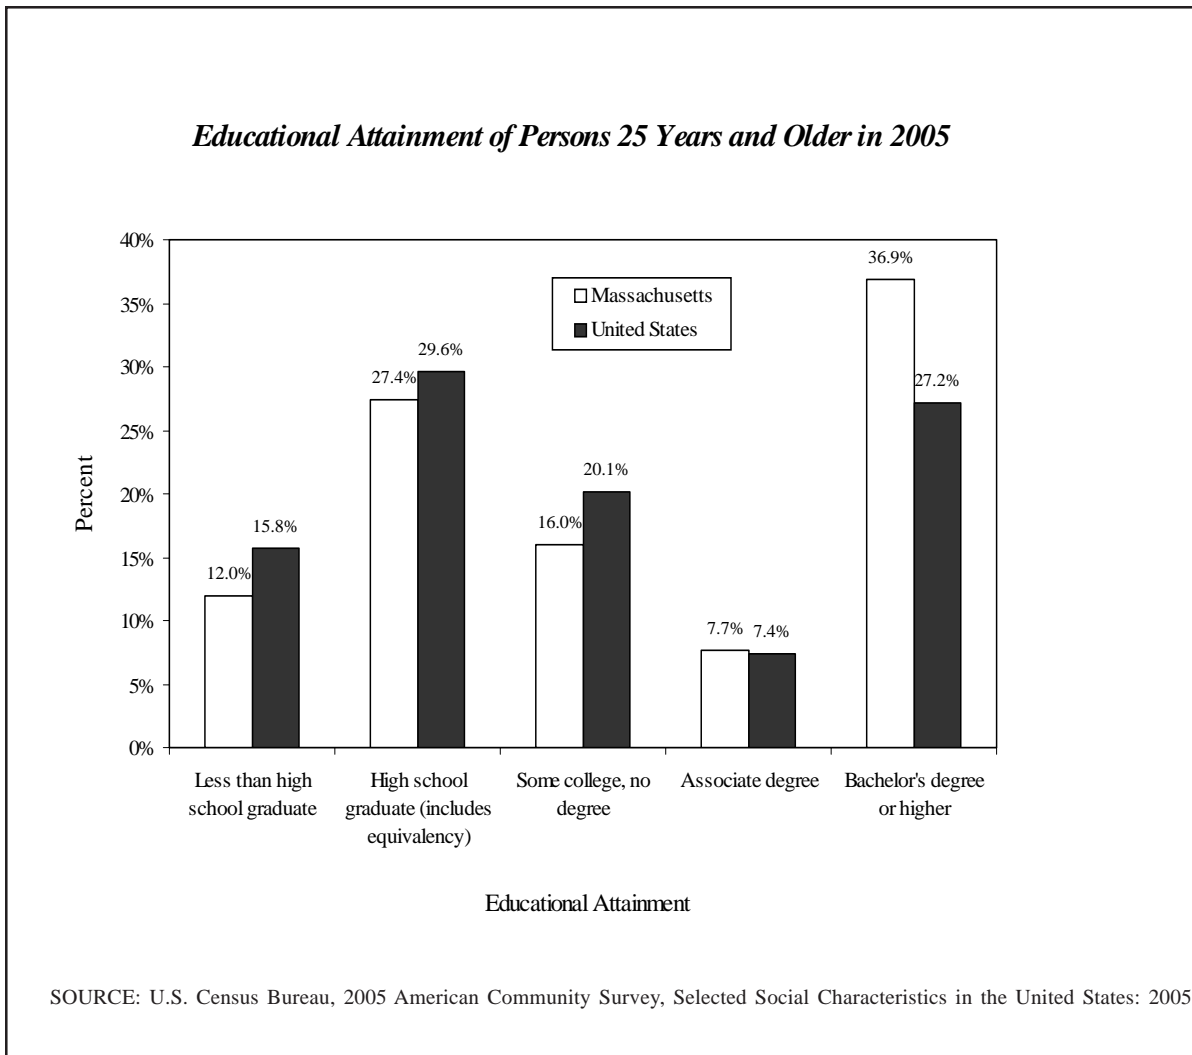

Over half of FY 2004 federal spending in Massachusetts was composed of health care and social programs like Medicare, Medicaid, Social Security, unemployment benefits and Section 8 Housing Vouchers. Massachusetts was above the national average in per capita federal grants to state and local governments, receiving \$2,163 per capita compared to a national average of \$1,545. Per capita federal spending on salaries and wages in 2004 was lower in Massachusetts than in the rest of the nation, \$554 compared to a national average of \$750, but Massachusetts was above the national average in per capita direct federal payments to individuals (\$4,139 compared to a national average of \$3,839). Massachusetts ranked 9th among states in per capita procurement contract awards, \$1,422 compared to a national average of \$1,089 in 2004. The following chart shows the composition of direct federal spending within Massachusetts in fiscal 2004, excluding loans and insurance.

Human Resources. The availability of a skilled and well-educated population is an important resource for the Commonwealth. The level of education reached by the population of Massachusetts compares favorably with the level in the United States as a whole. In 2005, the Census's American Community Survey (ACS) reported that Massachusetts had a smaller proportion of persons who had not completed high school (12.0 percent) than the national average (15.8 percent) and a much higher proportion of persons with a bachelor's degree or more (36.9 percent) than the nation (27.2 percent).

While Massachusetts' black and Hispanic population achieved college degrees at roughly half the rate of the white population, they fared much better than the national average.

Massachusetts has a higher minority enrollment in institutions of higher education than New England. However, the percentage of enrollment of blacks, Hispanics, and Asians in higher education in Massachusetts is below the national average. These percentages, which do not include military academy enrollment, are seen in the chart below.

Higher Education Enrollment by Race and Hispanic Origin in 2004

	Black	Asian	Native American	White	Hispanic	Race Unknown
Massachusetts	6.5%	6.1%	0.4%	61.4%	5.1%	14.5%
New England	6.0%	4.6%	0.5%	67.2%	4.8%	12.4%
United States (2003)	11.6%	5.8%	1.0%	62.4%	9.5%	NA

Note: Black, Asian, Native American and White totals reflect non-Hispanic population. Does not include the category non-resident alien. Table does not include enrollment at military academies. U.S. data from the U.S. Dept of Education. SOURCE: New England Board of Higher Education analysis of U.S. Department of Ed. Data.

Massachusetts is an internationally recognized center for higher education, with 439,539 students in undergraduate, professional and graduate programs in the 2004/2005 school year, according to data supplied by the Institute of International Education (IIE). According to IIE, 27,985 foreign students were enrolled in Massachusetts colleges and universities in the 2004/2005 school year. This was a 2.3 percent decrease from the previous year but Massachusetts was ranked 4th among states for foreign student enrollment. The Massachusetts public higher education system is composed of universities, state colleges, and community colleges with a combined enrollment of 187,519 students in 2004, 45 percent of whom attended part-time. In addition, Massachusetts has a system of private higher education that accounted for 57 percent of total enrollment in Massachusetts in 2004. More than a fifth of the students attending private institutions were enrolled on a part-time basis. The strength of both public and private colleges and universities as centers for research and education contributes to the high quality of the Massachusetts work force and plays a key role in attracting and retaining business and industry within the state.

The higher education system in Massachusetts is particularly strong in post-graduate, scientific, and technical education, with 1,481 science and engineering doctorates awarded in 2004, 4th in the nation. Massachusetts conferred a total of 2,320 doctorates in 2003. Massachusetts was also ranked 2nd in the U.S. in science and engineering postdoctorates in doctorate granting institutions in 2003, with 5,986.

The pre-eminence of higher education in Massachusetts contributes not only to the quality of its work force, but also to its stature in the nation and the world as a center for basic scientific research and for academic and entrepreneurial research and development. Doctorate-granting institutions in Massachusetts received 4.7 percent (\$2 billion) of total national academic expenditures on R&D in fiscal 2004. Massachusetts ranked sixth in the nation behind California, New York, Texas, Pennsylvania and Maryland.

The diversity of federal funding sources reflects the variety of research and development work performed at Massachusetts educational institutions. Of the \$1.25 billion in total fiscal 2003 federal outlays for science and engineering research to universities and colleges in Massachusetts (and their affiliated federally funded research and development centers), 59.6 percent was from the Department of Health and Human Services, 18.0 percent was from the National Science Foundation, 10.4 percent from the Department of Defense, 5.9 percent was from the Department of Energy, and 4.4 percent was from the National Aeronautics and Space Administration. Massachusetts ranked 4th in the nation in 2003 in total federal outlays for research and development, with total federal spending of \$5.16 billion in the state.

Given the quality of the Commonwealth's research and development sector, it is not surprising that Massachusetts fares better than the national average in homes with computer and internet access. According to Census's October 2003 Current Population Survey, 64.2 percent of Massachusetts households had access to a computer, compared to 61.8 percent nationally and 58.1 percent of its households were connected to the internet while the national average was 54.7 percent.

Primary and Secondary Education Data. Although spending on education is not necessarily an indicator of results, Massachusetts has spent from 12 to 29 percent more per pupil on primary and secondary education than the national average since at least 1981. During the 2003-2004 school year, Massachusetts increased per student expenditures to \$10,693; 29 percent higher than the national average. The table on the following page shows expenditures per pupil for Massachusetts and the United States since fiscal 1981.

***Expenditure Per Pupil in Public Elementary and Secondary Schools,
1981-2004***

(in current, unadjusted dollars)

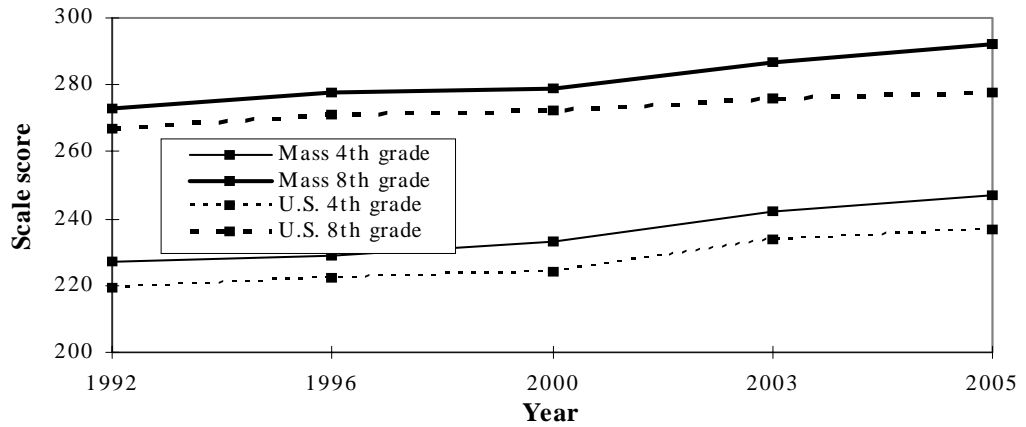

<i>Fiscal Year</i>	<i>Massachusetts</i>	<i>United States</i>	<i>Ratio (MA/U.S.)</i>
1981	\$2,735	\$2,307	1.19
1982	2,823	2,525	1.12
1983	3,072	2,736	1.12
1984	3,298	2,940	1.12
1985	3,653	3,222	1.13

The National Assessment of Educational Progress (NAEP), also known as "the Nation's Report Card," is the only nationally representative and continuing assessment of what America's students know and can do in various subject areas. Since 1969, assessments have been conducted periodically in reading, mathematics, science, writing, U.S. history, civics, geography, and the arts. Under the current structure, the Commissioner of Education Statistics, who heads the National Center for Education Statistics in the U.S. Department of Education, is responsible by law for carrying out the NAEP project.

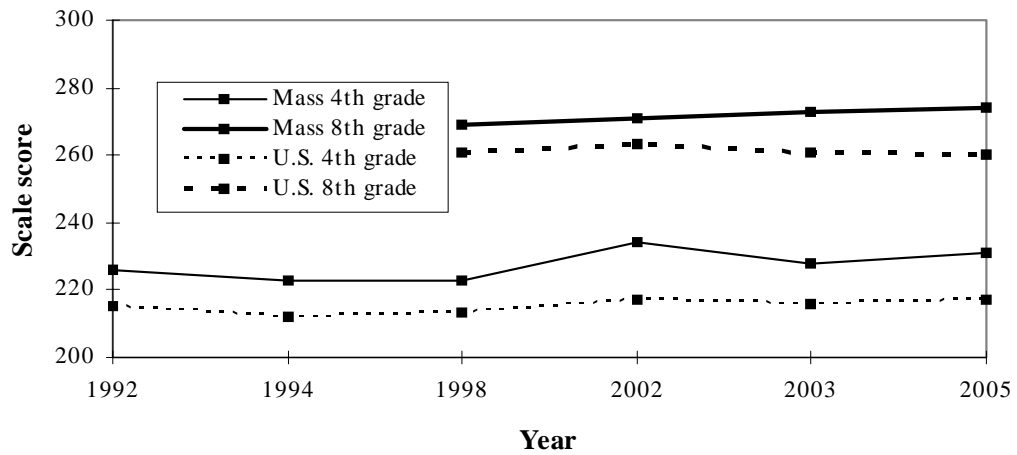

Since 1990, NAEP assessments have also been conducted to give results for participating states. Those that choose to participate receive assessment results that report on the performance of students in that state. In its content, the state assessment is identical to the assessment conducted nationally. However, because the national NAEP samples were not, and are not currently designed to support the reporting of accurate and representative state-level results, separate representative samples of students are selected for each participating jurisdiction/state. The graphs on the following page compare the data available for Massachusetts to the nation.
