**The Commonwealth of Massachusetts**

---

In the Year One Thousand Nine Hundred and Eighty-Eight.

---

AN ACT FURTHER REGULATING LOW OR MODERATE INCOME HOUSING.

*Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:*

1 Section 23 of chapter 40B of the General Laws, as appearing  
2 in the 1986 Official Edition, is hereby amended by inserting after  
3 the word "housing", in line 22, the following words: — and,  
4 provided further, that the committee shall not issue any order that  
5 would permit the building of such housing if the density of the  
6 proposed housing exceeds two-hundred and fifty percent of the  
7 density limitation imposed by the local applicable zoning  
8 requirement.

The first part of the report is devoted to a general  
 description of the project and the work done during  
 the year. It is followed by a detailed account of the  
 experimental work, which is divided into two main  
 parts: the first part deals with the general  
 properties of the system, and the second part  
 deals with the specific properties of the system.

The results of the experimental work are presented  
 in the following sections. The first section deals  
 with the general properties of the system, and the  
 second section deals with the specific properties of  
 the system. The results are compared with the  
 theoretical predictions, and it is found that the  
 experimental results are in good agreement with the  
 theoretical predictions.

The conclusions of the report are that the system  
 exhibits the following properties: (1) the system  
 is stable, (2) the system is linear, (3) the  
 system is isotropic, and (4) the system is  
 homogeneous. These properties are in good  
 agreement with the theoretical predictions.

The work done during the year has been  
 supported by the National Science Foundation  
 under Grant No. G-12345. The author wishes to  
 express his appreciation to the members of the  
 staff of the Department of Physics for their  
 assistance during the course of the work.
