

# Weapon Injury Data

Notes from the Weapon-Related Injury Surveillance System

March 2000

## Weapon-Related Injuries

### Reported by Hospital Emergency Departments

This bulletin briefly summarizes gunshot wound (GSW) and sharp instrument wound (SIW) data collected by the Massachusetts Department of Public Health's Weapon-Related Injury Surveillance System (WRISS) on injuries treated by hospital emergency departments during 1998.

The overall number of gunshot and sharp instrument wounds reported to WRISS, among Massachusetts residents, decreased statewide from 1,897 in 1997 to 1,773 in 1998; a statistically significant decline of 7% ( $p < 0.05$ ). Table 1 provides an overview of injuries reported to WRISS over a five year period by intentionality of the injury (violence, accidental, etc.) and the type of weapon involved. Violence-related gunshot and sharp instrument wounds declined dramatically from 1994 to 1998; (52% and 34% respectively).

Table 2 provides the number of violence-related injuries reported in 1998 among specific population groupings and cities and towns.

### Notes

Based on record reviews conducted from 1994-1996, hospitals report approximately 70-80% of reportable cases. Numbers and rates provided here are not adjusted for hospital underreporting. Pre-hospital deaths are not captured by the system. Rates are based on 1997 population data estimates developed by the Massachusetts Institute for Social and Economic Research.

**Table 1. Number of Injuries Treated by Massachusetts Emergency Departments for Gunshot and Sharp Instrument Wounds, 1994-98**

	Number of Cases Reported by Year					Rates
	1994	1995	1996	1997	1998	1998
<b>Massachusetts Residents:</b>						
Violence-Related Sharp Instrument Wounds	1885	1684	1553	1353	1253	20.1
Violence-Related Gunshot Wounds	662	526	393	312	318	5.1
Firearms	623	500	337	269	290	4.7
Nonpowder guns	37	20	43	25	20	0.3
Unknown gun type	2	6	13	18	8	0.1
<i>Total Violence-Related Cases</i>	2547	2210	1946	1665	1571	25.2
Accidental Gunshot Wounds	163	155	166	158	117	1.9
Firearms	69	65	55	56	44	0.7
Nonpowder guns	92	86	108	96	71	1.1
Unknown gun type	2	4	3	6	2	0.0
Self-Inflicted Gunshot Wounds	47	47	35	26	31	0.5
Firearms	44	43	32	22	30	0.5
Nonpowder guns	3	3	3	3	1	0.0
Unknown gun type	0	1	0	1	0	0.0
Unspecified Gunshot Wounds	108	100	72	48	54	0.9
<i>Total Other Cases</i>	318	302	273	232	202	3.2
<b>Total Massachusetts Residents</b>	<b>2865</b>	<b>2512</b>	<b>2219</b>	<b>1897</b>	<b>1773</b>	<b>28.5</b>
<b>Total Out-of-State Residents</b>	<b>63</b>	<b>53</b>	<b>53</b>	<b>50</b>	<b>43</b>	
<b>Total Cases</b>	<b>2928</b>	<b>2565</b>	<b>2272</b>	<b>1947</b>	<b>1816*</b>	

NOTES: Rates are per 100,000 population based on 1997 population data estimates developed by the Massachusetts Institute for Social and Economic Research. Based on reviews from 1994-1996, hospitals report approximately 70-80% of reportable cases. Rates are not adjusted for hospital underreporting.

\*The count for 1998 'Total Cases' was erroneously reported as 1861 on the first printing of this bulletin.

## Impact Assessment

The Massachusetts Gun Control Act of 1998 (Chapter 180) became effective in October of the same year. This law changes the requirements for the purchase, possession, storage and licensing of firearms. Key provisions include the installment of trigger locks on all new handguns, a mandate requiring safe storage of all guns, a ban on the sale of "junk guns" and assault weapons, stricter licensing standards and background checks, increasing the age of eligibility for obtaining a license from 18 to 21 years, and requiring a safety training course for new license

applicants.

WRISS data will provide one measure of the impact of this law on firearm-related injuries in Massachusetts. Our assessment, however, is dependent on the data reported to us by hospital emergency departments. For this reason, it is essential that ED's continue to report all potential cases, and that data are up to date, and complete. We appreciate your hospital's continued commitment.
