II

In reading the tables presented below, the reader should note that: (1) the total releasee population is subdivided according to the specific institution of release; (2) N represents the total number of individuals in the releasee population who fall into the corresponding category in the table; (3) % represents the proportion of the number of individuals in a particular category to the total number of releasees from that institution; and (4) Recidivism Rate (indicated as R.R. in the tables) represents the proportion of the total number of individuals in that category that have recidivated.

For example, in reading Table I presented on page 2, the variable, "Type of Release" is presented and the following kinds of information can be obtained: the total releasee sample of all individuals has been broken down according to the institution from which they were released. This is labeled and presented horizontally across the head of the table. The type of release - parole or discharge - is labeled and presented vertically. Of the 911 individuals released in the year 1974, 136 were released from MCI-Walpole. Of the 136 individuals released from Walpole, 110 (81%) were released on parole and 26 (19%) were released on a discharge. Those individuals released from Walpole on a parole had a recidivism rate of 26%, whereas those individuals released from Walpole on a discharge had a recidivism rate of 8%.
