Trends in Degrees Conferred, 1979 - 1986

Between 1979 and 1986, the number of degrees conferred by Massachusetts colleges and universities increased 3.8% compared to a national rise (1979-1985) of 5.9%. Even though the number of degrees awarded in the Commonwealth has grown more slowly than in the rest of the nation, Massachusetts still produces a higher than average number of degrees per capita or per student. Massachusetts, with 2.4% of the nation's population, accounted for 3.5% of the nation's enrollment, 4.0% of all degrees granted, 4.9% of graduate degrees, and 5.4% of doctorates. (Attachment 1.)

The most striking trend in this period is the decline in the number of degrees conferred in the public sector (-7.1%). While the closure of Boston State College very likely contributed to this trend, the decline in associate degrees granted (-11.5%) is the major reason for the fall off, accounting for 58.5% of the decrease. Equally significant, while degrees were declining, enrollments at public institutions increased more than 5% during that period. Of special interest is that the number of degrees awarded to minority students increased only 2.6% between 1978 and 1984, even though minority enrollment increased 36.1% during this same period, substantially more than the overall average.

UNIVERSITY OF MASSACHUSETTS  
AMHERST

The statewide increase is attributable to the independent sector. From 1979 to 1986, the independent sector granted 4,505 more degrees (9.8%). The independent sector realized gains in all levels except the Associate Degree which fell 113 or 1.9%. Doctoral Degrees granted increased 564 (36.5%). Baccalaureate, Masters & Certificate of Advanced Graduate Studies (CAGS) and First Professional Degrees grew 2,873 (11.9%), 880 (7.7%) and 301 (9.8%) respectively.

In contrast, the public sector conferred fewer degrees at all levels except the First Professional which remained relatively constant. The Associate Degree led the decline losing 1,064 for a 11.5% decrease; the Masters and CAGS level declined 500 or 17.6%. The Baccalaureate and Doctorate degrees declined slightly. The closing of Boston State College in 1982 contributed to the decrease in the number of Masters and Baccalaureate granted at public institutions. In June of that year, Boston State College awarded 403 Masters and 798 Baccalaureate degrees, 14.1% and 6.0% of the respective public sector totals. Since that time, however, the number of public sector Baccalaureate and Masters degrees increased. In fact, 388 more Masters were granted in 1986 than in 1983 for a 20% gain. Over the same four year period the number of Baccalaureate degrees rose 1.2%.

At the Associate and graduate degree level, there are significant differences between the two sectors in the distribution of degrees. (Attachment 2.) Associate degrees account for 34.6% of all the degrees awarded in the public sectors and only 11.3% in the independent sector. For both sectors combined, the Associate Degree accounted for 18.7% of all degrees, well below the national rate of 24.9%. With some of the most prestigious universities in the nation, the independent sector dominated graduate education, awarding more than 85% of the post baccalaureate degrees in the Commonwealth. Graduate degrees account for 27.7% of all Massachusetts degrees compared to 21% across the nation. The percentage of students receiving baccalaureate degrees is roughly the same in both sectors: 54.3% in the public sector and 53.4% in the independent sector, compared to 54% for the entire nation.

Across all institutions, the number of minorities receiving degrees increased 1,454 or 41.4% (Attachment 3.) Blacks received 108 more degrees for a 5.3% increase; Asians realized the largest increase of 736 or 115.4%; and Hispanics were second gaining 645 for a 97.4% increase. Both Whites and American Indians realized decreases, 996 fewer Whites and 35 fewer American Indians received degrees. Minorities, as a whole, accounted for only 6.8% of the degrees granted state-wide, which was up from 4.9% in 1979.

The independent sector awarded more degrees in all ethnic categories. The largest increase occurred for Hispanics (586 or 132.9%). Asians were second with an increase of 607 or 122.6%. Blacks received 229 more degrees for an increase of 15.8%. American Indians and Whites remained relatively stable showing gains of 5 (6.2%) and 823 (2.0%) respectively. Thus the percentage of minorities receiving degrees in the independent sector increased from 5.4% to 7.8%. In the public sector only Asians and Hispanics received more degrees. They experienced gains of 129 (90.2%) and 59 (26.7%) respectively. The number of degrees awarded to Blacks, American Indians and Whites declined 121 (20.2%), 40 (46.5%) and 1819 (7.5%) respectively. Because of the large decline in degrees conferred to Whites, minorities now account for 4.5% of all degrees conferred, up slightly from 1979 (4.1%).

There are three major factors that might explain the drop in the rate at which Massachusetts public higher education institutions confer degrees. First, attrition or drop-out rates may be increasing for public higher education students. Second, students in public higher education may be taking more time to complete their degrees. Finally, public higher education students may be pursuing different courses of study.

Increased attrition rates would indicate that an increasing proportion of the students who begin work on a given degree withdraw before obtaining the degree. This could be attributable to an increasing proportion of incoming students with poor academic preparation. During the coming year, the Regents will be addressing the problem of attrition/retention as part of its study of the undergraduate experience.

Students could also take longer to complete a degree because of the extra work needed to remedy academic deficiencies and because they are studying part-time. Between 1978 and 1986 the number of part-time students increased 10,721 or 14%. However, during this same period, full-time enrollment decreased slightly, 401 or .4%. Additionally, public colleges and universities are attracting older students who tend to be part-time. Students, 25 years old and older, showed the greatest gain between 1984 to 1986, increasing 22.8% while the national rise was 6.2%. Most of the statewide gain was in the 25 - 39 age group. For example, the community colleges showed a 23.0% increase in this age group. (Chancellor's Report to the Board of Regents, September 1987)

The decline in the number of degrees conferred by public institutions may also reflect a change in the degree level pursued by students. There may be an increasing tendency among Massachusetts Community College students to either pursue certificate or other non-degree programs or to transfer into

Baccalaureate level programs before the Associate Degree is completed. This trend may explain the difference in Associate degrees awarded at Massachusetts public institutions compared to higher education institutions nationwide. Nationally, the number of Associate degrees awarded increased 12.9 percent between 1979 and 1986, compared to a decrease of 11.5 percent for Massachusetts public universities and colleges. In addition, between 1983 (after the close of Boston State College) and 1986, the number of Associate Degrees declined 8.2%, while the number of Bachelor's Degrees increased 1.2%. The issue of student transfer will also be addressed in the Regents' study of undergraduate education.

The changes noted above could also be related to the economic renaissance enjoyed by the Commonwealth. Studies indicate that community colleges are especially sensitive to business cycles; when recessions occur enrollment in two year institutions mushroom as students seek to sharpen their skills in a contracting employment market. When the economy soars, as has been the case in the past two years, students are tempted by high paying jobs to either leave school or to pursue their studies part-time or to seek certificates rather than degrees. However, this reasoning may not fully explain the decrease in Massachusetts. Other state public higher education systems such as New York (up 1%), New Jersey (up 10%) and Connecticut (down 1%) have not experienced this sharp decline in the number of associate degrees granted.

Finally, the most prevalent fields of study for which degrees were granted (Business and Management, Engineering, Social Science, Education and Health Science) were very similar in both Massachusetts public and independent higher education institutions. The following table shows the similarity in those degrees constituting more than 5% of the total in each sector. (See Attachment 4 and 5 for the 50 HEGIS/IPEDS program categories.)
