

Massachusetts Department of Correction Covid-19 Daily Inmate Testing Report

Through its medical vendor Wellpath, the Massachusetts Department of Correction (MA DOC) provides COVID-19 testing to symptomatic inmates/patients and close contacts when clinically indicated. Additionally, large scale and targeted testing is periodically conducted for asymptomatic inmates/patients through mobile testing. Inmate testing is voluntary, yet strongly encouraged.

The dashboard is based on a culmination of data collected by Wellpath for all testing types and is based on the test result date. As some inmates may have tested multiple times, this reporting is inclusive of all tests including duplicates. The dashboard displays the inmate/patient COVID-19 daily test counts [1] based on the test result date and displays counts by test results, deaths [2], demographics, DOC institutions, respective county and city/town which are based where the inmate was housed when tested.

Effective as of April 13, 2022:

Positive Test and Positive Inmate counts are based solely on an inmate's positive antigen test without a confirmatory PCR test, or a positive PCR test following a negative antigen test.

Prior to April 13, 2022:

Positive Test and Positive Inmate counts were based solely on an inmate's positive PCR test.

NOTE: Covid-19 Positive Test Note: Chapter 93 of the Acts of 2020 and the operative SJC Orders concerning the Special Master in SJC-12926 contain different reporting requirements. The dashboard positive counts do not include tests that require confirmation through a polymerase chain reaction (PCR) test; these counts are reported on the confirmatory test date. Effective April 13, 2022, PCR confirmatory testing is no longer required when the inmate tests positive via antigen test, unless clinically indicated.

- [1] Test results do not appear each day; only dates with test results appear in the date dropdown selector. Inmate test counts of one (1) to four (4) are reported as 1-4; five (5) and over are reported as the actual count.
[2] Deceased counts are based on the inmate's date of death.

NOTE: Chapter 93 of the Acts of 2020 and the operative SJC Orders concerning the Special Master in SJC-12926 contain different reporting requirements. In addition, the DOC dashboard does not include tests that require confirmation through a polymerase chain reaction test. Tests that require confirmation through a polymerase chain reaction test are reported respectively on the confirmatory test results date. The test results do not appear each day; only dates with test results appear in the selector. Inmate test counts are based on the test result date and counts of one (1) to four (4) are reported as 1-4; five (5) and over are reported as the actual count.. **Deceased counts are based on the inmate's date of death
